PROFILE

AI developer specializing in computer vision and real-time systems. Experienced in building face recognition pipelines with authentication, image processing, and automated reporting using Python and OpenCV.

PROJECTS

SMART CLASSROOM ACCESS / ATTENDANCE SYSTEM | Python, OpenCV, NumPy

- Developed integrated system combining face recognition, QR validation, and role-based access control
- Designed QR validation workflow for secure and fast user check-in
- Built role-based access control system (student, faculty, admin)
- Implemented face encoding and matching logic for accurate user authentication
- Achieved 92% detection accuracy across controlled test samples
- Reduced manual attendance effort by approximately 85%
- Designed modular system architecture for real-time processing and scalability
- Built unknown-user detection with timestamp-based logging system

SMART TIMETABLE MANAGEMENT SYSTEM | Python

- Designed scheduling system with rule-based conflict detection
- Structured timetable data for efficient updates and retrieval
- Implemented validation logic to minimize scheduling conflicts

DATA ANALYSIS PROJECTS | Python, SQL

- Analyzed dataset of 1,000+ records to identify performance trends
- Performed data preprocessing and cleaning for improved accuracy
- Built dashboard for visualization and automated reporting

SKILLS

PROGRAMMING
Python, SQL
TECHNOLOGIES
OpenCV, Pandas, NumPy
TOOLS
Git, Excel, Google Sheets, Tableau
CONCEPTS
Computer Vision, Machine Learning, Image Processing, Real-Time Systems, Data Visualization, Deep Learning (Basic)

EDUCATION

B.TECH – COMPUTER SCIENCE (AI & DATA SCIENCE) | Siddhartha Institute of Science and Technology

2027 | CGPA: 8.1

CERTIFICATIONS

Google Data Analytics – Coursera
Full Stack Development – SmartBridge
